## INTRODUCTION

The "World List of Serials in Agricultural Biotechnology" represents a subset of the "World List of Agricultural Serials" which was developed at the National Agricultural Library in cooperation with CAB International (CABI) and the Food and Agriculture Organization of the United Nations (FAO). Other sources were also used including online indexing and abstracting databases, printed bibliographies, World List of Agricultural Serials, Ulrich's, Derwent's, OCLC, the National Agricultural Library collection, and various other specialized lists. This list of world serials in agricultural biotechnology was compiled by the NAL's Biotechnology Information Center and represents journal titles of agricultural biotechnology in its broadest sense. Biotechnology research and literature is characterized by its multidisciplinary nature and scope. As a result, many of the included titles may appear, at first glance, to be peripheral to the central subject. However, with further examination of specific titles, it will be apparent that their inclusion in the list is warranted.

The list is arranged alphabetically by title and includes a Place of Publication Index, a Corporate Name Index, and a Subject Index. Also, call numbers are included for records representing serials held in the collection of the National Agricultural Library in Beltsville, Maryland.

Because it is the nature of serial titles to change, it was necessary to include title changes as new entries. All original records and subsequent title changes are cross-referenced, however. Comments regarding additions or changes to the list would be welcomed.

We hope that this list will be an invaluable tool for information specialists, librarians, and others who are engaged in identifying hard-to-locate serials in agricultural biotechnology published throughout the world. By assisting the information professional we may also promote and encourage research, development, and education in this latest agricultural revolution.

## **ACKNOWLEDGEMENTS**

The publication of this "World List of Serials in Agricultural Biotechnology" could not have been realized without the cooperation and assistance of several individuals and units at the National Agricultural Library. In particular we wish to thank Idalia Acosta and Stanislaw Kosecki, NAL Cataloging Branch, for willingly cooperating with us to develop this list. Also, special thanks are extended to David Goldberg, of the NAL Information Systems Division, for the technical and editorial assistance he provided toward the realization of this project. Finally, special thanks are expressed to the staff of the Biotechnology Information Center for discussions, input, and assistance during the initiation and completion of this world serials list.

All of these individuals and cooperators have helped to assure that this publication truly represents a world list of serials in agricultural biotechnology. Their assistance is gratefully acknowledged.

## **DEDICATION**

For his years of service in the areas of research, teaching and public outreach, this publication is dedicated to Robert D. Warmbrodt who passed away in December 1992.

## READERS' GUIDE

The bibliographic data for each title have been compiled from a variety of sources. Many of the records have been taken from the NAL cataloging master file of serial records, some were downloaded from OCLC, and others were manually input from data received from CAB International and the Food and Agriculture Organization of the United Nations. These records were originally cataloged over a large span of time, using several sets of cataloging rules and transliteration schemes. Some of the titles had never been cataloged before, and the data available for them were very brief. The NAL Cataloging Branch staff has attempted to correct the inconsistencies between various records, using the Anglo-American Cataloging Rules, 2nd edition (AACR2) as a guide. However, there may still be differences in forms of corporate name headings and in the application of diacritical accent marks in some languages. Unfortunately the typesetting programs prevent the display of some accent marks used in some of the 34 languages that are represented by records in the text. Because the data have been compiled using AACR2, there is some redundancy within selected records.

The 3,729 records in this list are sorted alphabetically by title in a word by word pattern with punctuation ignored. Each record begins with an accession number. Many of the titles are qualified in parentheses by corporate bodies or places of publication to differentiate between similar titles. Beginning and/or ending volumes or dates are displayed next, followed by additional corporate bodies and alternate titles, with titles in other languages following the term "Parallel title." Titles used on occasional issues are denoted by "Variant title" or "Title varies" and titles from sources in the publication other than the chief source of information (usually the title page or cover in the absence of a title page) are indicated by "Other title," "Cover title" (when the title on the cover differs from that on the title page), "Spine title," "Running title," "Caption title," and "Added title page title."

The city of publication and publisher are given in italics followed by the earlier and/or later titles if applicable. It is in the nature of serials to change titles, merge with other serials, and split away again. Every time a title changes, a new cataloging record is necessary, according to AACR2, which is the basic tool for library cataloging in English-speaking countries. Library of Congress subject headings follow, giving an indication of the subject content of each title. Some of the information is enclosed within square brackets. This is an indication that the data did not appear within the publication, but were added by the cataloger.

The second paragraph of each record contains the language or languages of the text and summaries, followed by the place of publication. There are titles published in 83 different countries printed in this list. The next elements in the records are the most recent frequency of the publication, the International Standard Serial Number (ISSN), the NAL call number if the serial is held in the collection of the National Agricultural Library, and an indication of where the title is indexed, if it is indexed in AGRICOLA, AGRIS, or CAB ABSTRACTS.
